

The Products

CatDV allows organisations with mixed environments (Avid Media Composer/Unity & Apple Final Cut Studio/XSAN) to manage all their assets within a single workflow. It can move assets from working production disk through to a disk based archive and then onto tape (offline) media.

The MatrixStore takes low-cost disk and turns it into a secure disk based repository. It is the safe place to protect the assets you are currently working on and the secure repository for all your original footage and final edits for as long as you need to keep them. Forever if you need to. With easy migration to new technologies as they become available, your archive stays alive for as long as you need it. The MatrixStore allows you to put everything you have ever created onto your network and gives your organisation direct access to your complete archive instantly, even world wide. And this access is as simple as a keyword search.

The Solution

Archive and restore individual assets or entire catalogues with a single click and without ever leaving the workflow. All associated meta-data is archived along with the assets ensuring you will be always able to find your content. Its ease of use and low management allows your employees to perform tasks that add value to your organisation and not spend time managing or finding data.

Protecting Your Digital Assets.

The MatrixStore protects your assets at every level including content and associated metadata.

Your Data at Your Fingertips

The MatrixStore keeps your assets always there and always available. Ready for use, when you need them.

CatDV the Central Hub

CatDV is the central hub catering perfectly for mixed editing and storage environments.

Final Cut and Avid

CatDV understands both creative environments, their projects and metadata. Perfect for mixed environments.

The MatrixStore and CatDV

Archive individual assets or entire catalogues with a single click, safe in the knowledge that you have two secure copies of your data.

Disk and Tape

Keep your assets online until such time that you want to move them offline. CatDV can move data from The MatrixStore into a tape archive.

Metadata

The integration protects the metadata captured by CatDV with the assets providing the ability to search hundreds of TB of online archive.
